The chainflex® types marked with a ³⁾ refer to cables that are based on a bundling of 4 cores each. Due to their excellent electrical properties (star-quad with especially low crosstalk), these cables can be used in virtually all cases in which twisted-pair cables are normally required.
Note: The given outer diameters are maximum values and may tend toward lower tolerance limits.

chainflex® CF2 cables are resistant to oil and coolants. e-chain®: System E4/00
